

Metabolife™ is a natural Ayurveda and Biophoton Resonance Technology based food supplement designed to improve sugar metabolism and reduce insulin resistance.

Insulin resistance is a condition in which insulin becomes less able to lower the level of glucose (sugar) in the blood. Usually, insulin helps sugar move out of the blood into the body's cells. In the cells, the body can use sugar to make energy. If this does not happen correctly, too much sugar stays in the blood. If the blood glucose level is above normal for a long time, this can lead to major health problems.

Taking Metabolife™ supplements twice per day in combination with a restricting consumption of carbohydrates may help to maintain blood sugar level and improve quality of life.

An extremely weak emission of electromagnetic waves emitted by biological systems in the optical range of spectrum is known as a biophoton emission. This phenomenon is observed in all living cells of plants, animals and human beings. It cannot be seen by the naked eye but can be measured and recorded using a special equipment. It has been found that a biophoton's emission is the steering mechanism behind all biochemical reactions.

Bio Resonance Technology (BRT) gives us a possibility to record a holographic image of the unique biophoton network that is characteristic for every existing herb or plant, enhance it substantially and after that "recorded" back to the carrier making its original healing qualities much stronger. This way BRT makes the best components that we use in our products, unbeatable. Using of BRT allows us to significantly increase the efficacy of the supplements, and reduce the dose of the formula.

INGREDIENTS:

Gymnema Sylvestre (Gurmar), Momordica Charantia (Karavellalw), Turmeric (Curcumin), Pterocarpus Marsupium (Vijaysar), Andrographis Paniculata (Kalmegh), Aegle Marmelos (Bael), Inositol, Isomalt

The Hindi term for **Gymnema Sylvestre** is gurmar, which is translated as sugar destroyer. This is because Gymnema Sylvestre leaves contain gymnemic acids, which are major bioactive ingredients that act to suppress the taste of sugar.

Momordica Charantia, also known as bitter melon, is a tropical plant whose fruit is used in Ayurvedic medicine. Bitter melon is linked to lowering the body's blood sugar. This is because the bitter melon has properties that act like insulin, which helps bringing glucose into the cells for energy.

Pterocarpus Marsupium is a famous herb in Ayurveda to lower the blood sugar naturally. Anti-diabetic action of this herb is due to the presence of bioactive compounds like isoflavonoids, terpenoids and tannins.

The extracts of **Andrographis Paniculata** are often used for treatment of diabetes and other disorders such as inflammatory, cognitive, and psychiatric disorders. It is used also in metabolic syndrome treatment, mainly high blood glucose, high blood pressure, and obesity.

Leaves of **Aegle Marmelos** are anti-diabetic whereas the bark and the root have proven anti-inflammatory properties. Aegle Marmelos have been used in Ayurveda medicine for thousands of years. Aegle Marmelos extract was found to significantly reduce serum glucose.
