

The Noppetite™ formula is created to decrease the appetite during and after fasting or weight loss diet, as well as to aid in the stress-induced food intake. This formula supports optimal functions of the appetite regulatory center of the hypothalamus. Most of the popular diets are based on the calories restriction and are not sustainable because of simple hunger. The Noppetite™ formula helps you to stay in compliance with the diet, promotes sugar metabolism, prevents overeating and supports healthy lifestyle.

An extremely weak emission of electromagnetic waves emitted by biological systems in the optical range of spectrum is known as a biophoton emission. This phenomenon is observed in all living cells of plants, animals and human beings. It cannot be seen by the naked eye but can be measured and recorded using a special equipment. It has been found that a biophoton emission is the steering mechanism behind all biochemical reactions.

Bio Resonance Technology (BRT) gives us a possibility to record a holographic image of the unique biophoton network that is characteristic for every existing herb or plant, enhance it substantially and after that “recorded” back to the carrier making its original healing qualities much stronger. This way BRT makes the best components that we use in our products, unbeatable. Using of BRT allows us to significantly increase the efficacy of the supplements, and reduce the dose of the formula.

INGREDIENTS:

Fenugreek (Methi), Gymnema Sylvestre (Gurmar), Caralluma Fimbriata (Yugmaphallottatna), Griffonia Simplicifolia (Kalonji), Andrographis Paniculata (Kalmegh), Turmeric (Haldi), Inositol, Isomalt

Curcumin, an active compound in Turmeric, is known for its antioxidant and anti-inflammatory activity that can promote healing. Studies have found that Turmeric may have pain-reducing power equal in some cases to that of prescription and over-the-counter medications.

Caralluma Fimbriata is a popular edible cactus from India. It has been used for thousands of years in Indian culture for helping suppress appetite during long hunts and times of famine.

Griffonia Simplicifolia is helping to support weight loss by reducing appetite. This herbal supplement may promote weight loss acting as an appetite suppressant. Consuming Griffonia Simplicifolia extract may control the feeling of hunger and the consumption of proper amounts of food.

The extracts of **Andrographis Paniculata** are often used for the treatment of diabetes and other disorders such as inflammatory, cognitive, and psychiatric disorders. It is used also in metabolic syndrome treatment, mainly high blood glucose, high blood pressure, and obesity.

It was found that **Fenugreek** reduced insulin resistance. It can help to improve the metabolic rate and aid digestion. This, in turn, can help reduce internal inflammation and bloating. Hence, start exercising, eat healthy (with proper portion control).

The Hindi term for **Gymnema Sylvestre** is gurmar, which is translated as sugar destroyer. This is because Gymnema Sylvestre leaves contain gymnemic acids, which are major bioactive ingredients that act to suppress the taste of sugar, by interacting with taste receptors on the tongue.
